

SHETH L.U.J. AND SIR M.V. COLLEGE

Aim : Working with Data Sources and Data Preparation in Tableau

Step A: Connecting to Different Data Sources

1. Launch the Tableau Desktop application.
2. Locate the blue Connect control panel on the far-left section of the start page.

Step B: Creating Data Extracts vs. Live Connections

1. Once the dataset populates the main staging view, navigate to the top-right corner of the Data Source interface.
2. Locate the connection mode toggle section.

SHETH L.U.J. AND SIR M.V. COLLEGE

3. Switch the active selection from Live over to Extract.

4. Click on the Sheet 1 navigation tab located at the bottom-left corner of the workspace screen. 5. A system dialog save window will immediately appear. Name the local snapshot file Ecommerce_Extract and click Save.

SHETH L.U.J. AND SIR M.V. COLLEGE

Step C: Managing Operational Metadata 1. Navigate to the blank workspace canvas on Sheet 1 and view the left-hand side Data Pane. 2. Rename a Field: Locate the dimensional attribute field labeled `order_status` or `Order Status`. Right-click the field name, select `Rename`, type in `Status`, and hit `Enter`.

SHETH L.U.J. AND SIR M.V. COLLEGE

4. Change a Data Type: Locate the operational timestamp column labeled `order_purchase_timestamp`. Click directly on the data type icon (which may incorrectly display as text `Abc` or a calendar date) positioned immediately to the left of the field name. Select **Date & Time** from the context dropdown menu to force proper structural recognition (Note: It may by default selected to Date and Time)

1. Create a brand new blank workspace sheet by clicking on the New Worksheet icon (the chart block containing a \$\$ symbol) positioned at the bottom navigation tab area. This opens Sheet 2.
2. Ensure your joined Orders dataset connection is highlighted at the top left of the Data Pane. Drag the newly modified Status dimension field and drop it onto the Rows shelf. A blue checkmark will appear on the source, designating it as the Primary data pipeline.

SHETH L.U.J. AND SIR M.V. COLLEGE

3. Move your mouse to the top application menu bar and click Data > Edit Blend Relationships. If the Option is grayed out as shown in the snapshot, click the New Data Source Option
4. Set the Primary data source field box to your active Orders connection, and map the Secondary data source block to the independent Customers dataset file.
5. Switch the selection toggle switch from Automatic over to Custom, click the Add... button on the right, pair customer_id from the left dataset column to customer_id in the right column, and click OK.

SHETH L.U.J. AND SIR M.V. COLLEGE

6. Now, go back to the top-left section of your Data Pane and click directly on the separate Customers dataset tracking label. An orange chain link icon will now appear locked together immediately next to the customer_id field.

7. Click and drag the customer_state dimension variable out from this secondary dataset list and drop it onto the Columns shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

1. Open a clean worksheet. Drag the quantitative measure field `payment_value` onto the Rows shelf and place the categorical dimension `payment_type` onto the Columns shelf.

SHETH L.U.J. AND SIR M.V. COLLEGE

. Dimension Filter: From your Data Pane list, drag the categorical string attribute payment_type and drop it onto the empty Filters shelf positioned immediately above the Marks card layout. Uncheck the box for not_defined, check the boxes for credit_card and boleto, and click OK.

SHETH L.U.J. AND SIR M.V. COLLEGE

. Measure Filter: Drag the quantitative numeric variable payment_value out from the measures list and drop it directly onto the Filters shelf. Select All Values in the prompt window, click Next, select the At Least option condition, type in 50 to screen out micro transactions(it will be at 0.1 at by default Change it by clicking on it and typing 50 on it), and click OK.

4. Date Filter: Drag the calendar configuration time variable order_purchase_timestamp and drop it onto the Filters shelf. Select Years or Relative Date from the prompt configuration layout page to isolate the visualization into specific historical reporting boundaries.

SHETH L.U.J. AND SIR M.V. COLLEGE

1. Extract Filters: Navigate back to the main Data Source configuration workspace screen. Look immediately below the selected Extract radio dial selection button in the upper-right area and click the small Edit link. Click Add, select the categorical field **Status**, choose to check delivered exclusively, and click OK. Tableau will purge all canceled or unfulfilled order rows from the local extract file entirely.

The screenshot displays the Tableau Desktop interface. The top menu bar includes File, Data, Server, Window, and Help. The main workspace is titled 'Orders (2)'. On the left, the 'Connections' pane shows 'Orders' as a 'Text file'. Below it, the 'Files' pane lists various CSV files, including 'Orders.csv'. The central area shows the 'Orders.csv' data source with 13 fields and 100757 rows. A table view of the data is visible, with columns for Order id, Customer id, Status, Order Purchase Timestamp, and Order Approved At. A context menu is open over the 'Status' field, showing options like 'Edit Filter...', 'Show Filter', 'Clear Filter', 'Add to Context', 'Apply to Worksheets', 'Create Set...', 'Find in Data pane', 'Dimension', 'Attribute', 'Measure', 'Discrete', 'Continuous', and 'Remove'. The bottom status bar shows the system clock as 11:48 on 16-07-2026.
